

The incomplete plan and incomplete elevation of two intersecting pipes are shown below.

- a) Complete the plan and elevation by projection, showing the curve of intersection;
- b) Project and complete a half-development of the larger vertical pipe-duct to show the true shape of the hole needed to accommodate the smaller angled pipe-duct;
- c) Complete a symmetrical half-development of the angled pipe-duct, splitting it along seam X-X that is symmetrical about the seam Y-Y.
