

The complete plan and end elevation, and the incomplete elevation of two intersecting hollow circular pipe-ducts are shown below.

- a) Complete the elevation by projection, showing the curve of intersection;
- b) Project and complete an half development of the larger vertical duct to show the true shape of the hole needed to accommodate the smaller pipe-duct;
- c) Complete a symmetrical half development of the smaller horizontal pipe-duct splitting the duct along its top edge on X-X.
